

NOVEMBER 2021

PI System: Data Infrastructure for Performance Intelligence

Presented By: Nathawan Hanpadungdhama, Presales Engineer - APAC

Agenda

Company Introduction

Introduction to PI System as a Data Infrastructure

PI System & Sigmafine

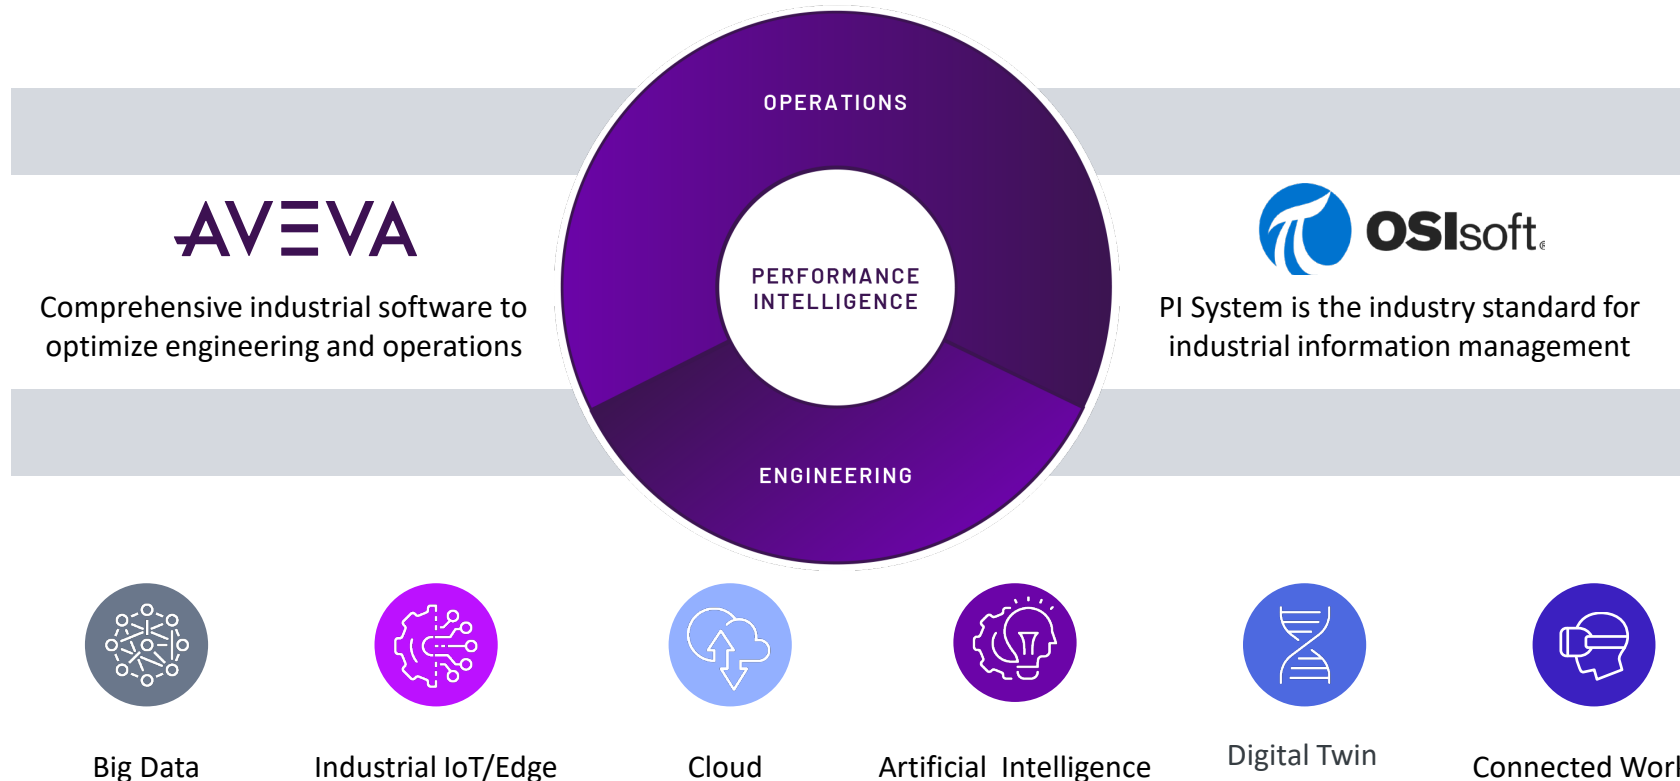

Company Introduction

Bringing together two world-class software experts

Delivering end-to-end customer value with best of breed industrial software

AVEVA Connect cloud services platform and AVEVA FLEX subscription program

1 Better data
Accuracy, reliability, context, scope and scale

2 Smarter solutions
With better integration, while maintaining neutrality

3 Proven results
Efficiency, agility, reliability, sustainability

Performance Intelligence

High fidelity asset
data enabling deep
analysis and accurate
reporting on asset
performance

AVEVA

Actionable, real-time
information about
current and future
performance based
on AI and machine
learning

PERFORMANCE INTELLIGENCE

The ability to rise to
today's and tomorrow's
challenges, seize
opportunities, and
achieve bus

We offer a powerful combination of technology and teamwork

10+

R&D Centers

6,500

Employees

22+

Project Centers

4,300

SI Partners

2,000+

R&D Capacity

120+

Sales Partners

16%

of Revenue
reinvested in R&D

250+

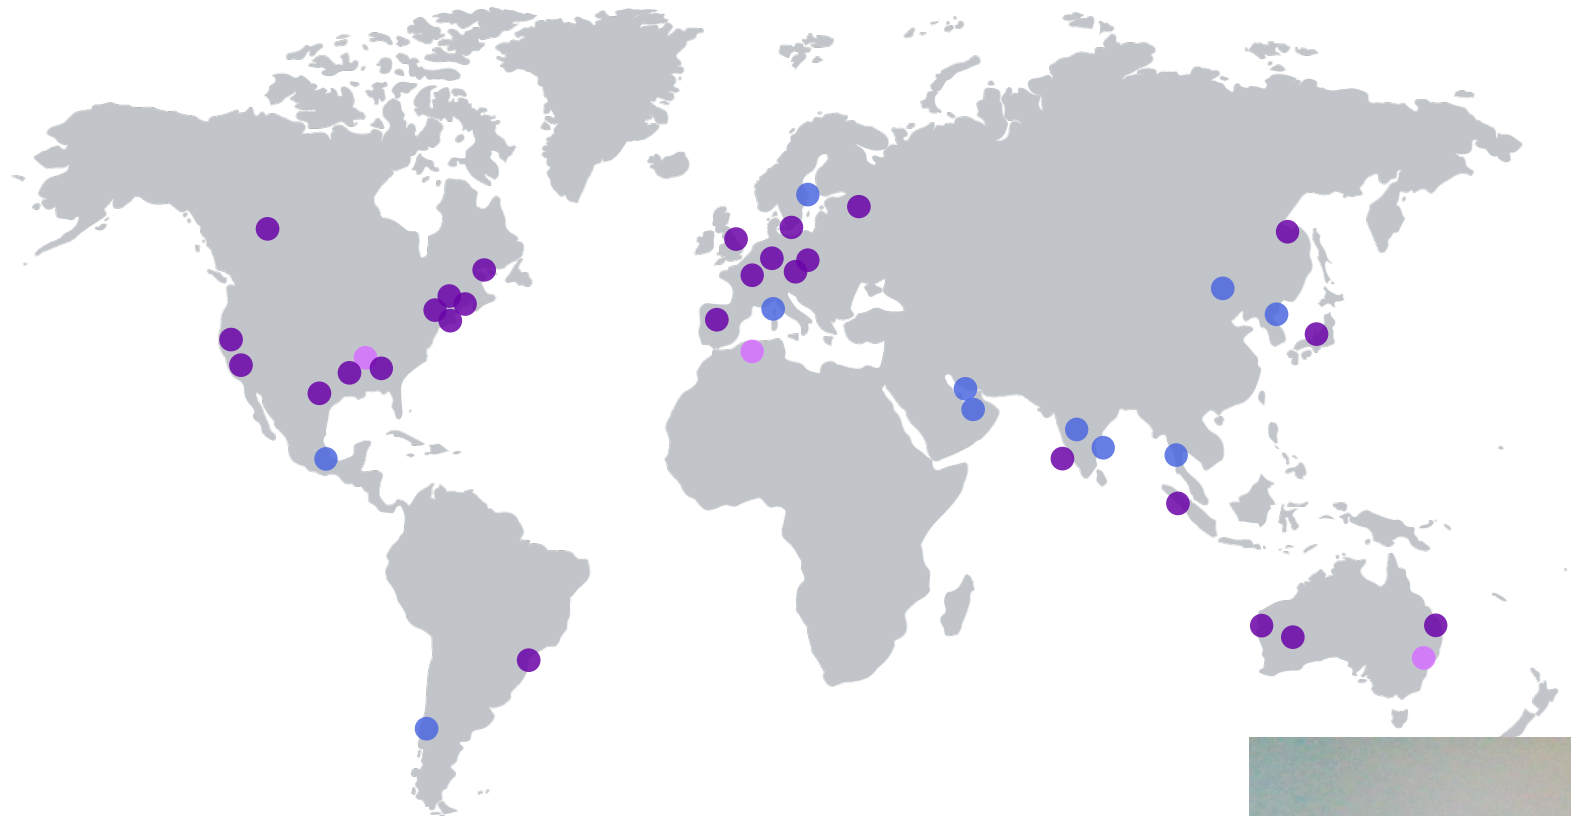

Tech Partners

85%

of deployments
supported by R&D

20+

Alliance Partners

R&D Center

Combined
and Project

PI System as a Data Infrastructure

Real-time operations data is the **lifeblood of your business**

And now, we're seeing an explosion of
data volume, variety, and velocity

Harnessing this data is essential

“

For industrial organizations, having a comprehensive operations data management strategy is key to achieving the promise of Industry 4.0 and unlocking operations insights and efficiencies”

IDC Technology Spotlight

What if you could eliminate data silos, monitor remote assets and maintain a central system of record for operations data, accessible by engineers across different domains and by analysts at the enterprise level?

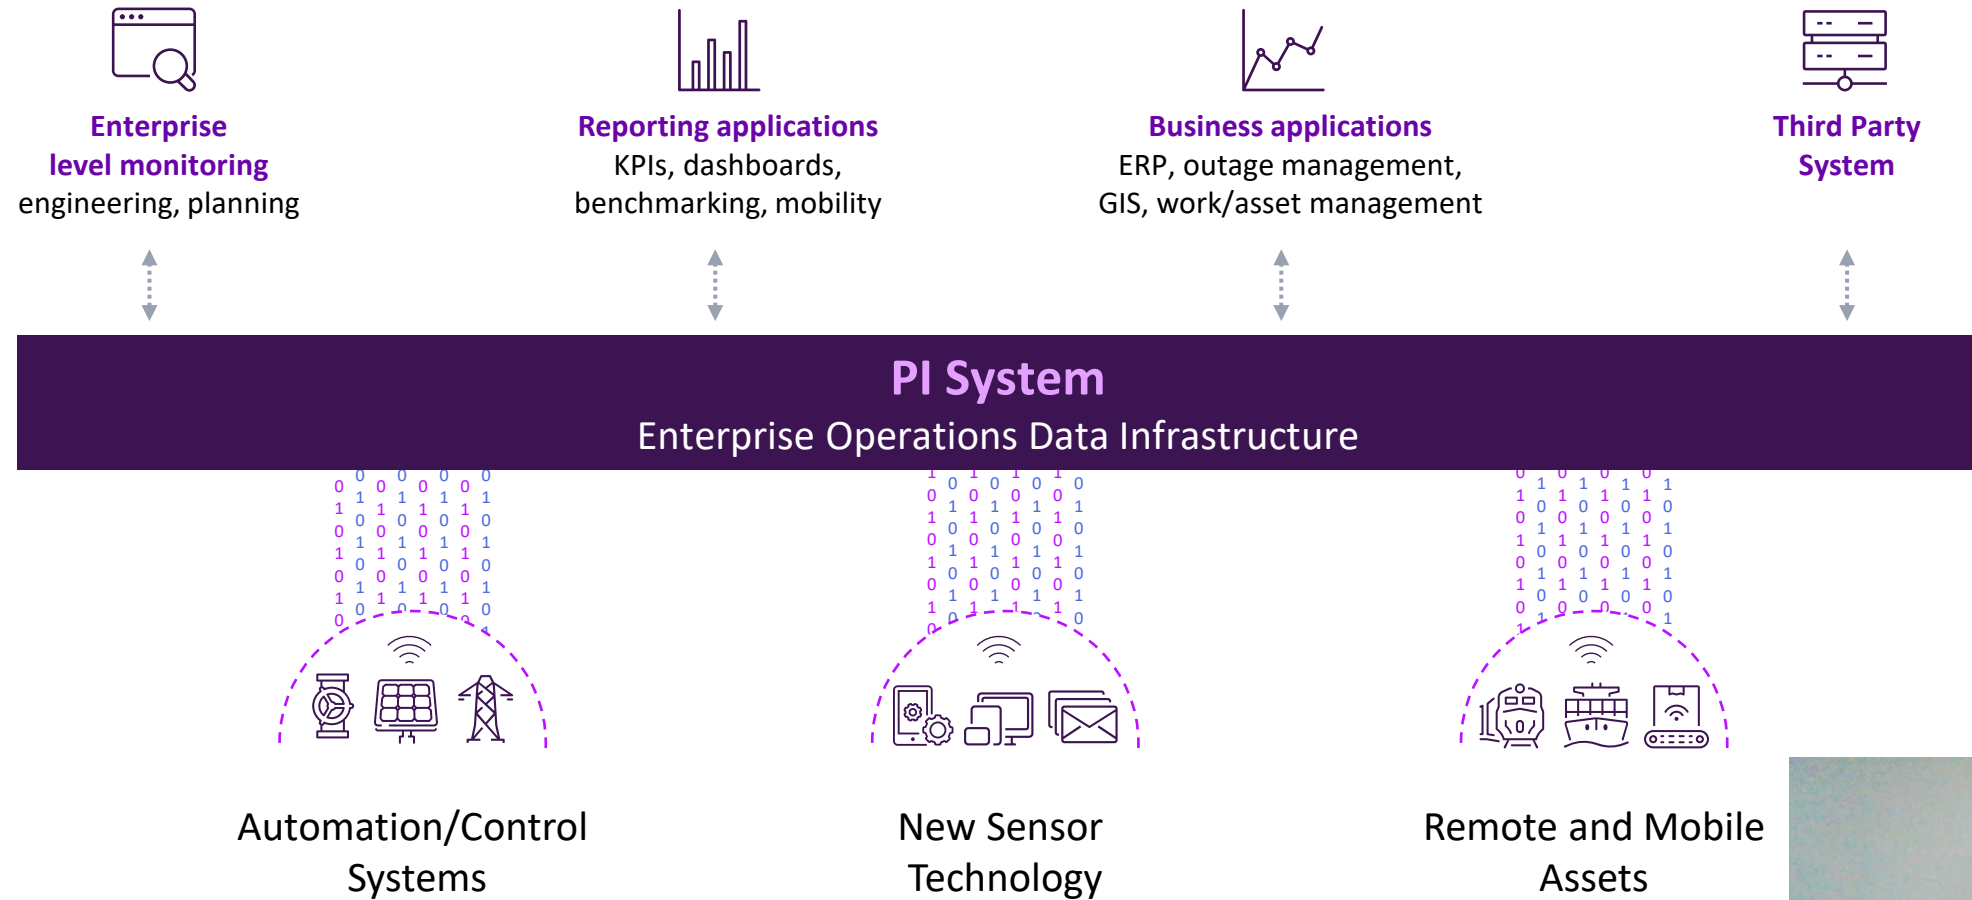

What if you could enhance that data with context so it is easily understood by users outside industrial operations?

What if you had an easy way to select and visualize data in a self-service tool, all without coding?

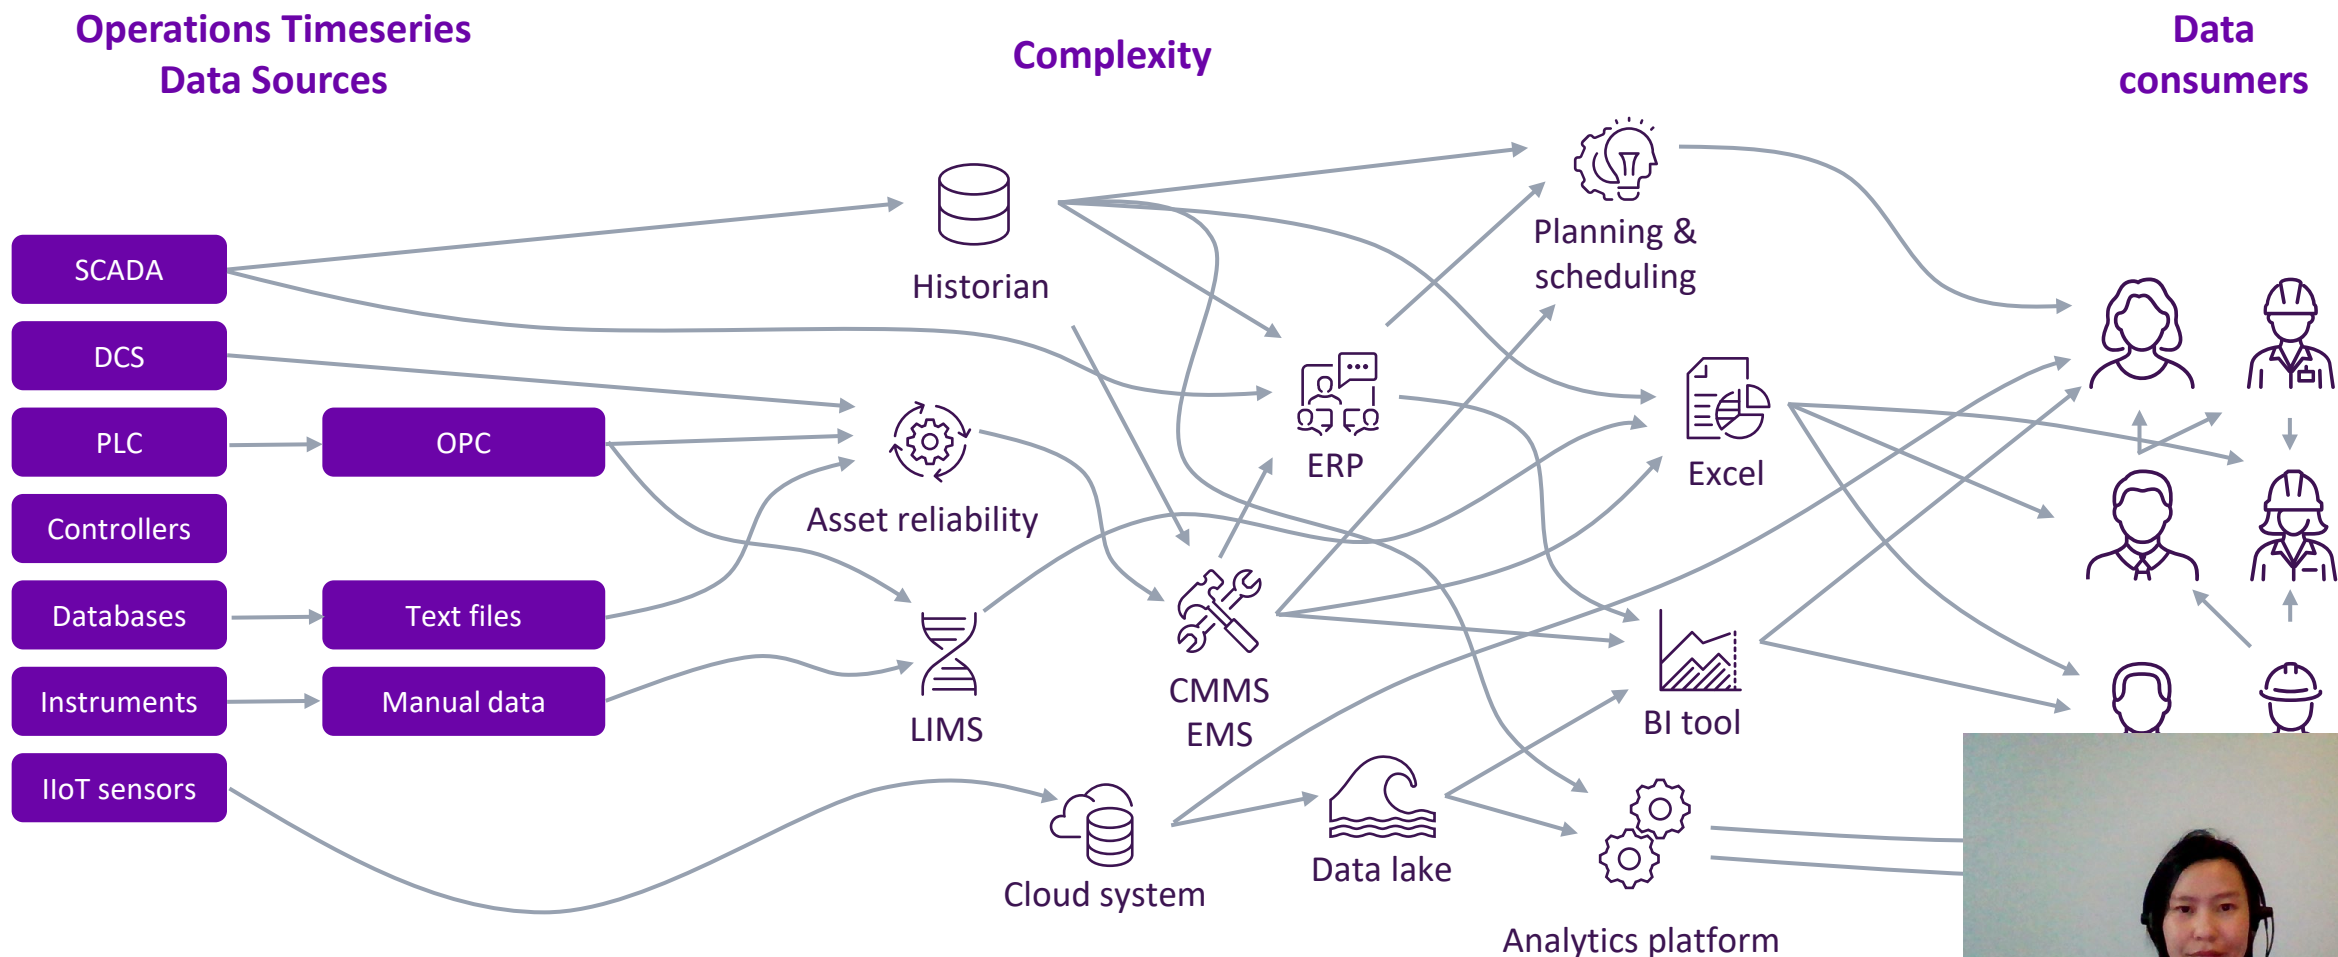

What if you could share data and data views with trusted col locations through a simple web browser?

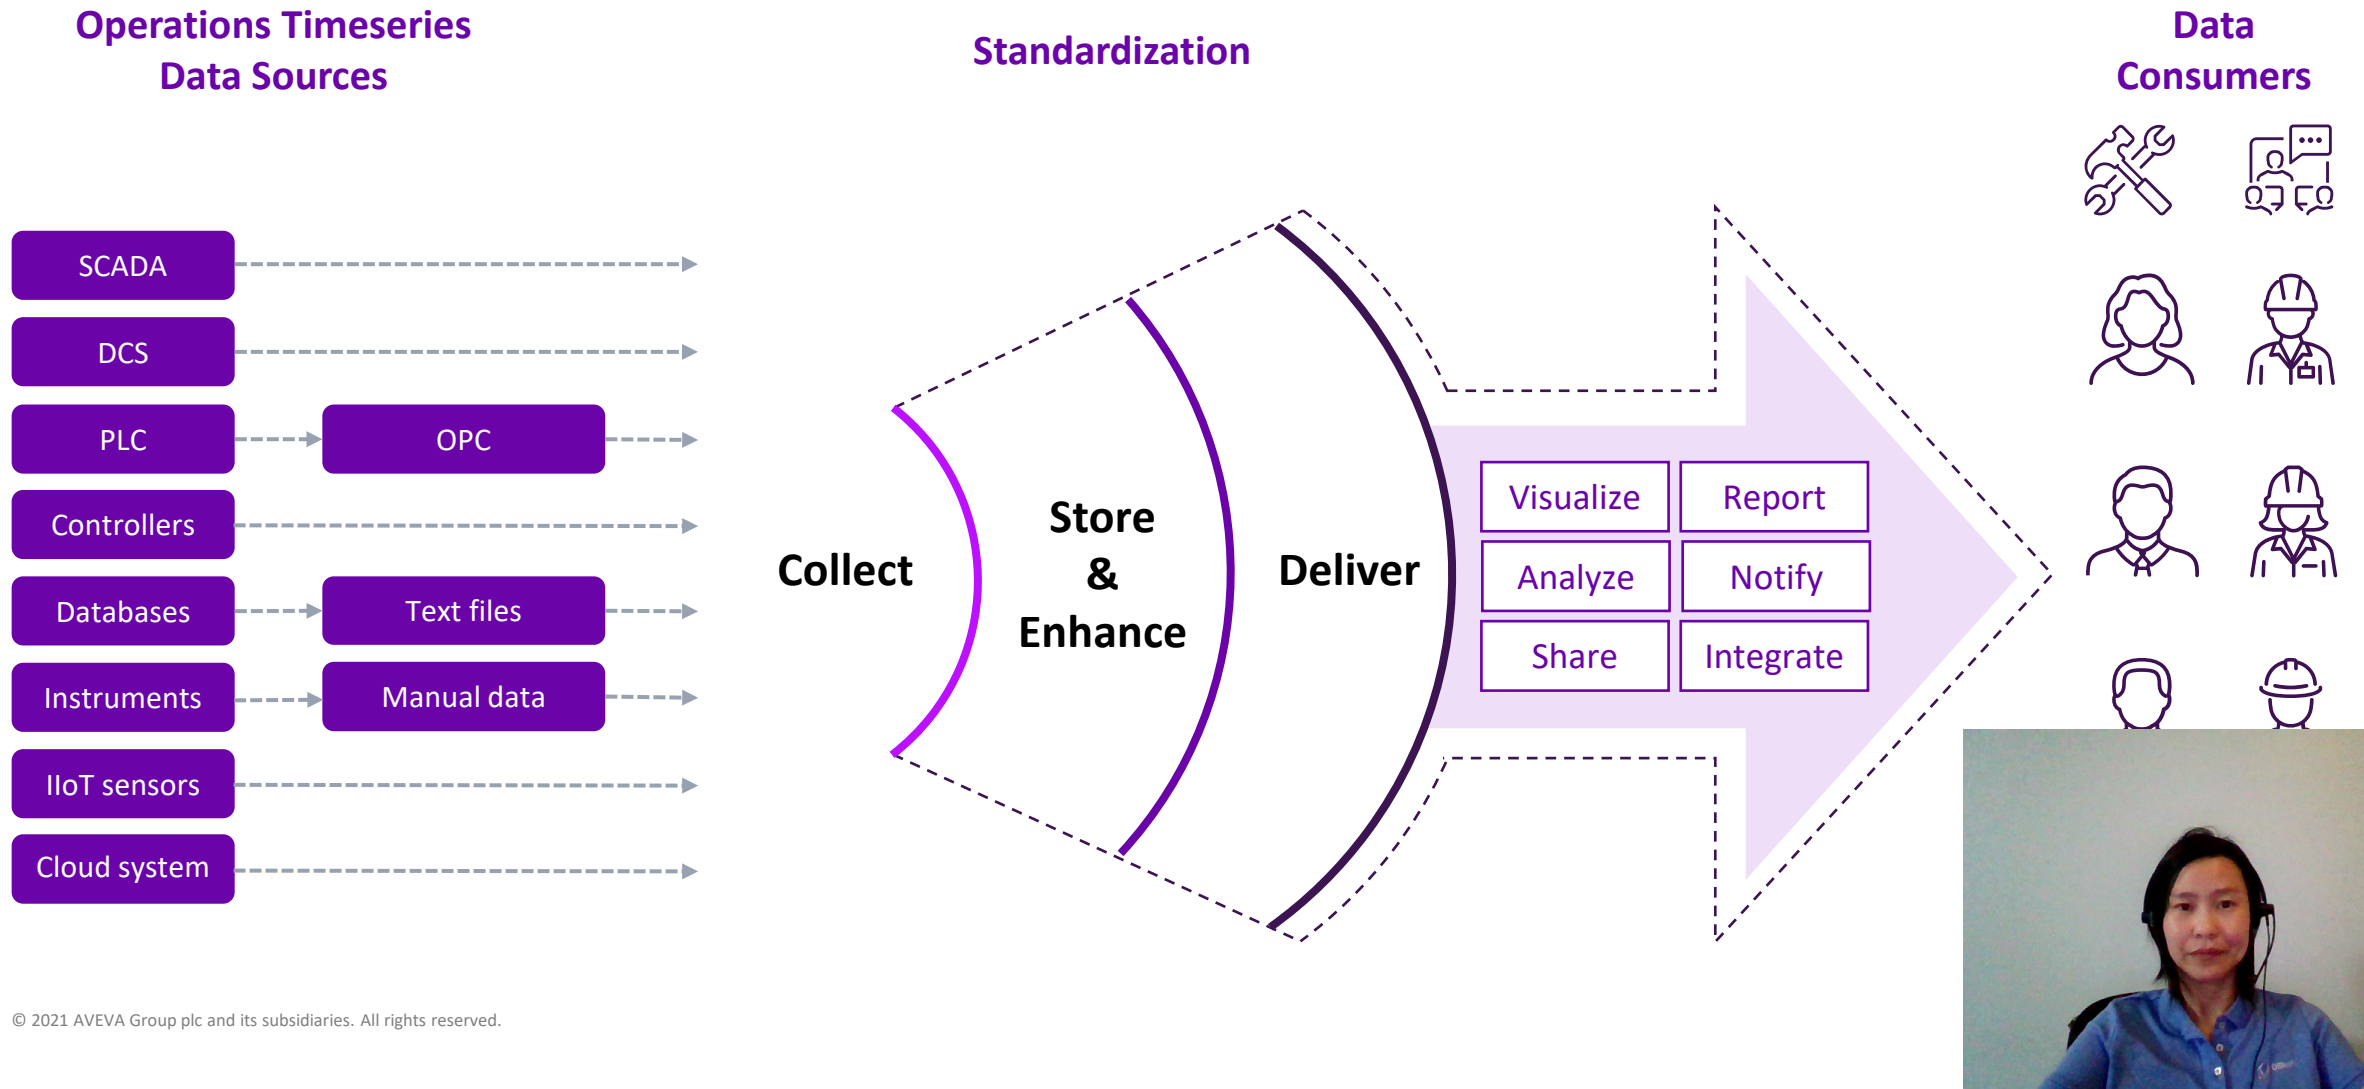

An Infrastructure Approach

Managing operations data is complex

Connect people to data with an infrastructure approach

How PI System technology helps our users

- It can **collect** the data that you need to make decisions
- It can **enhance** that raw data to turn it into actionable information
- And it can **deliver** it where and when you need it

Gather Operations Data From Past, Present, and Future Data Sources

- Connect to any asset regardless of vendor
- Supports 225+ industrial protocols
- Developed and maintained by us
- Configured. No programming required

Turn Raw Operations Data Into Decision-Ready Information

- Store high-frequency and large volumes of data
- Provide context to your data
- Run real-time analytics on your raw data
- Bookmark & notify of key events and batches in your data

PI Server

PI Server is the real-time data storage, normalization, analytics, and notification engine at the **heart of on-prem deployments.**

- Single source of truth for all users
- Layered capabilities enhance operations data

PI Server

Data Archive

Optimized storage & access to massive volumes of operational data

- Store millions of data streams and thousands of values per second over multiple decades
- Maintain the original fidelity of your data
- Keep your data online for immediate, real-time retrieval
- Store future data from predictive models and other sources

PI Server

 MP01.HOU.PV

Asset Framework

Organize and contextualize your operational data in a way that makes sense to users across your enterprise — not just SCADA experts

- Label data with human-friendly names
- Group related data into Assets
- Add metadata and context manually or from external systems
- Standardize groupings, labels, and units with Templates

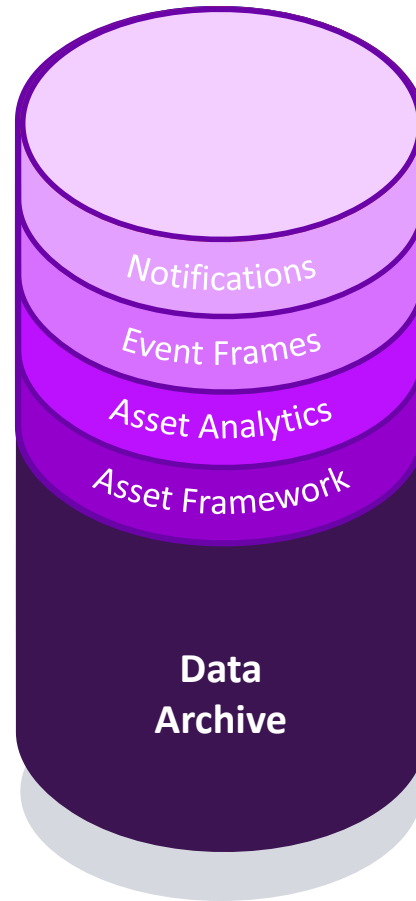

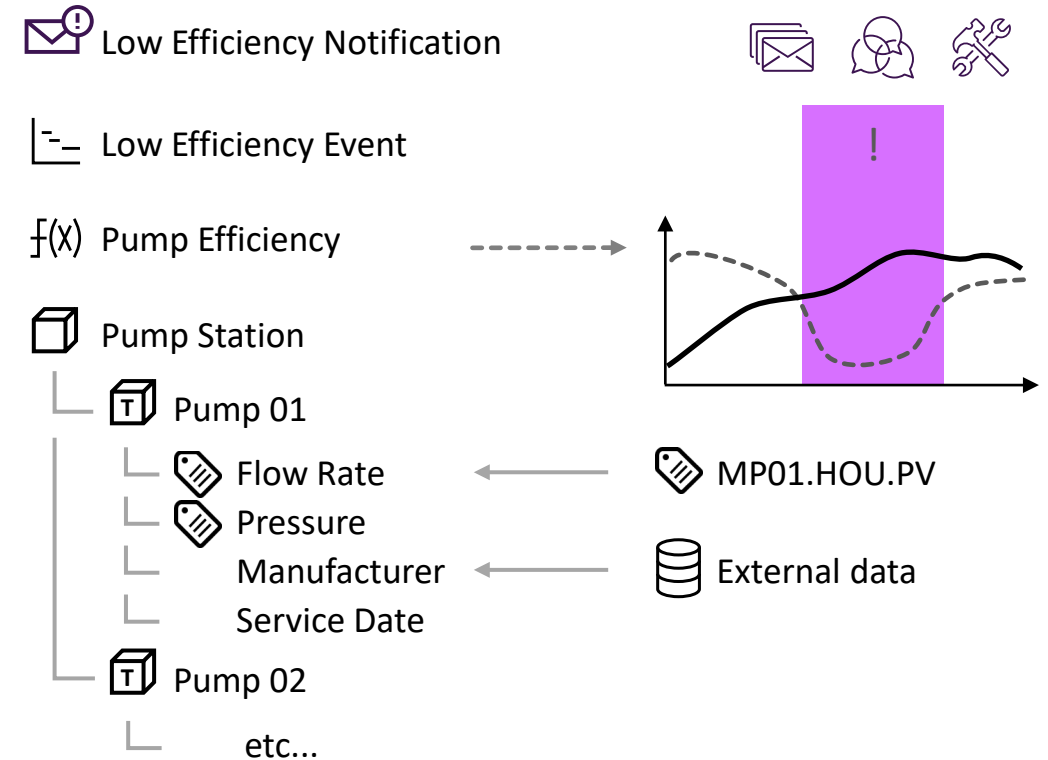

PI Server

PI Server is the real-time data storage, normalization, analytics, and notification engine for on-prem.

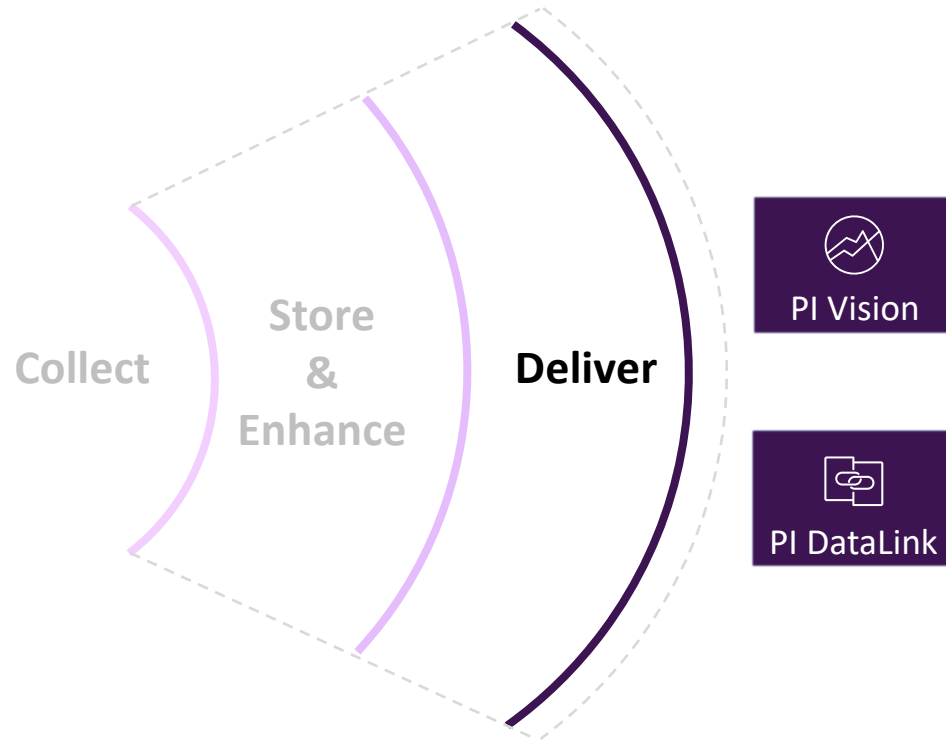

- Single source of truth for all users
- Layered capabilities enhance operations data

PI Server

Turn Raw Operations Data Into Decision-Ready Information

- View KPI's in excel or on any device with a web-browser
- Truly real-time, displays that update in seconds, not minutes
- Build dashboards or reports without requiring help from IT

PI Vision

The fastest, easiest way to visualize PI Server data

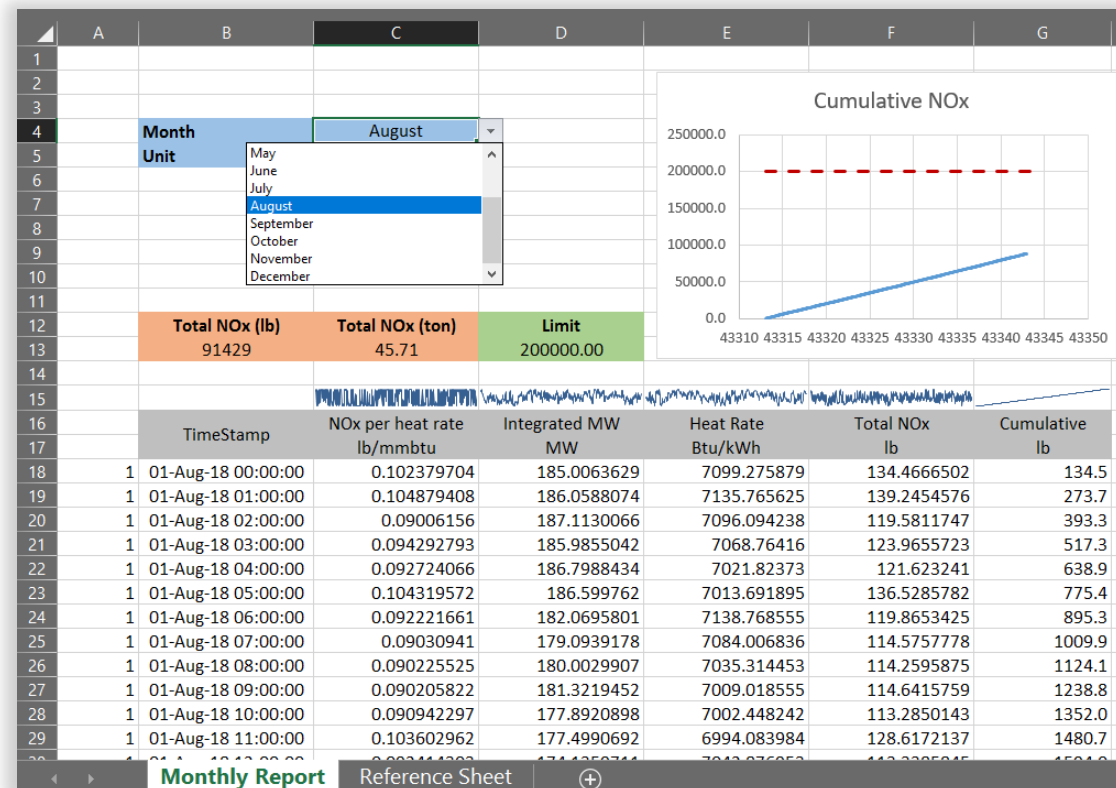

- An **easy to use, self-service, scalable** solution
- Access data from any web browser, including **mobile device** browsers
- **Organize and share** displays across your organization

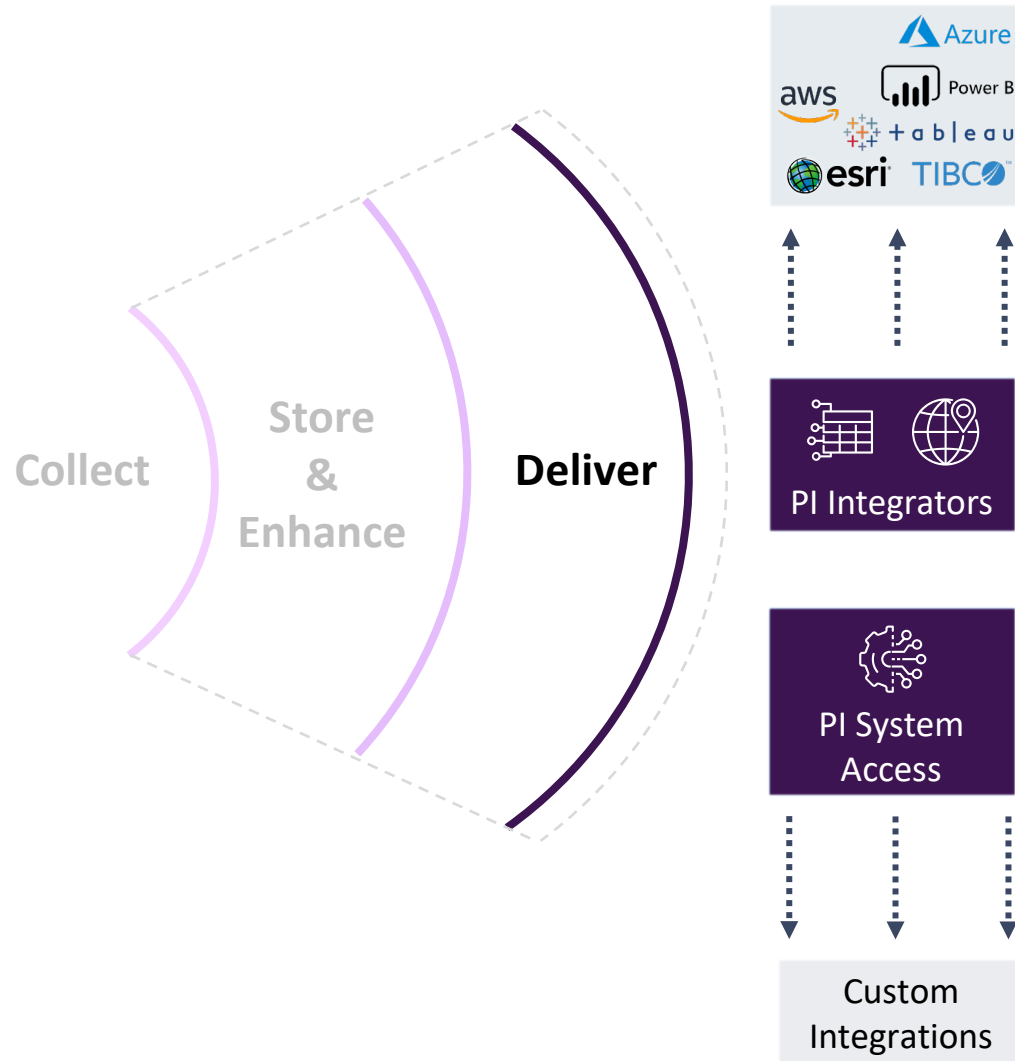

PI DataLink

Delivering data to Microsoft Excel

- Create **live, interactive, spreadsheet reports** that easily compare and analyze assets
- Summarize **years of historical data** and view alongside **real-time data**
- Allows **summary calculations** and **filtering** of the data
- Access to Excel functionalities

Extending Further

- Bring trustworthy operations data to additional tools
- Move data between business and geographic boundaries
- Programmatic access to build anything on PI System

The operations data infrastructure approach

A truly comprehensive Operations Data Management solution

From This...

...To This

Data silos and stranded remote assets

Inability to access data without IT support

Difficulty understanding context of raw data streams

Cost and delays associated with data wrangling

Expensive systems and networks for secure data sharing

Collect and integrate high volumes of data from any source, including process data, remote assets and IIoT devices

Easy, self-service data visualization and extraction

Flexible, reusable data structures which present data in context for users inside and outside operations

Data platform offering data normalization, layered analytics, event tracking, and alert notifications

Purpose-built cloud services to provide secure data without VPNs

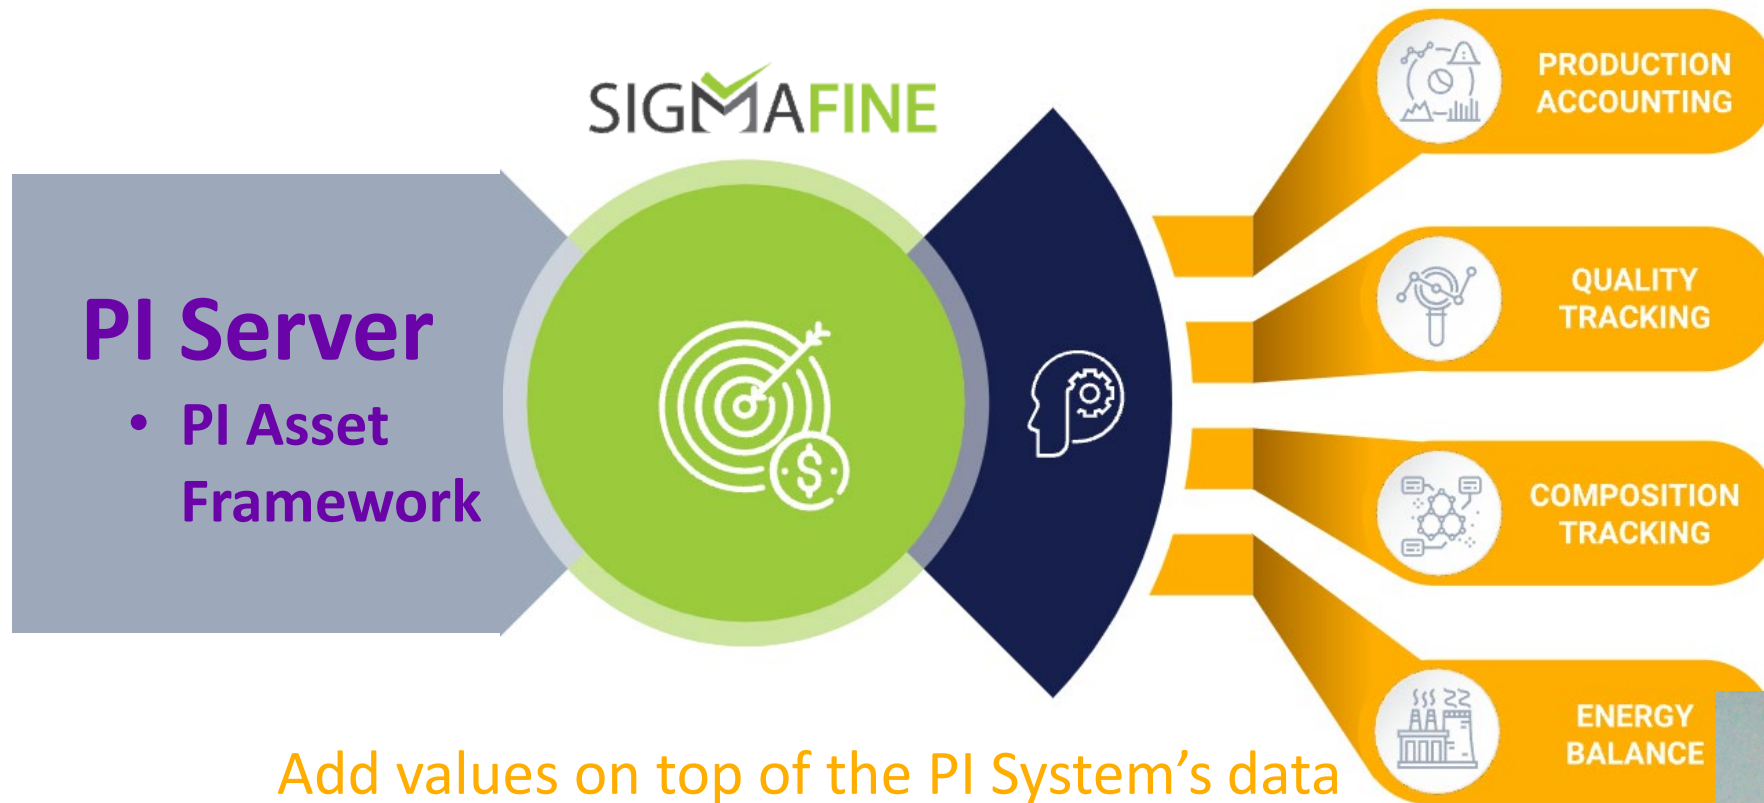

PI System + Sigmafine

PI System + Sigmafine

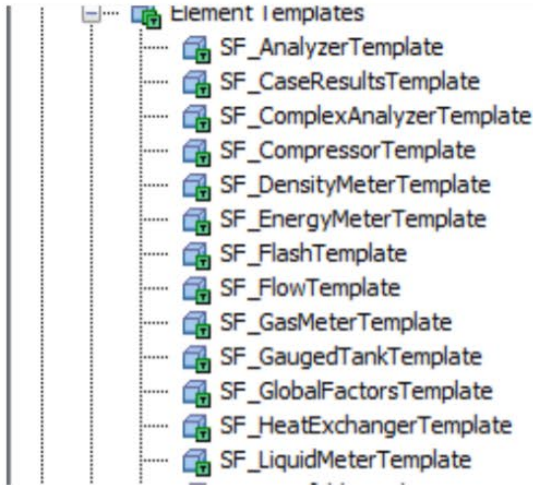

In relationship since 1999

Add values on top of the PI System's data

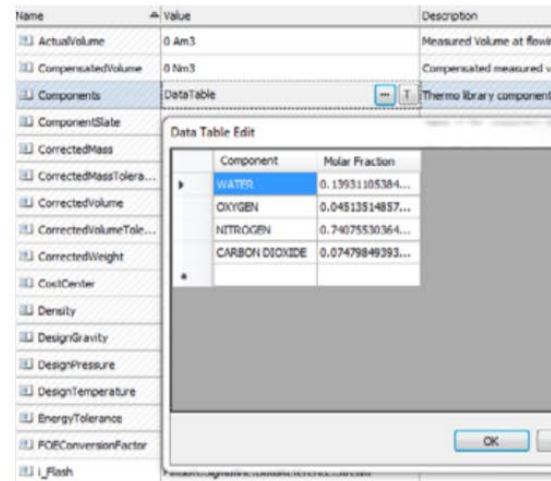

Sigmafine provides modeling capabilities plugged in the PI Asset Framework

Templates

Ready made template for equipment, tanks, meters,...

Elements

Assets are joined together in a model

- Components
- Composition Tracking
- LNG Calculation
- Sigmafine
- Tank Volume From Gauge
- Thermodynamics Package
- UOM

Data references

Data preparation such as meter and inventory compensation, thermodynamic calculations, etc.

- Component Mass Balance
- Composition Tracking
- Energy Balance
- Gross Error Analysis
- Quality Tracking
- Sigmafine Balance
- Volume Balance

Analyses

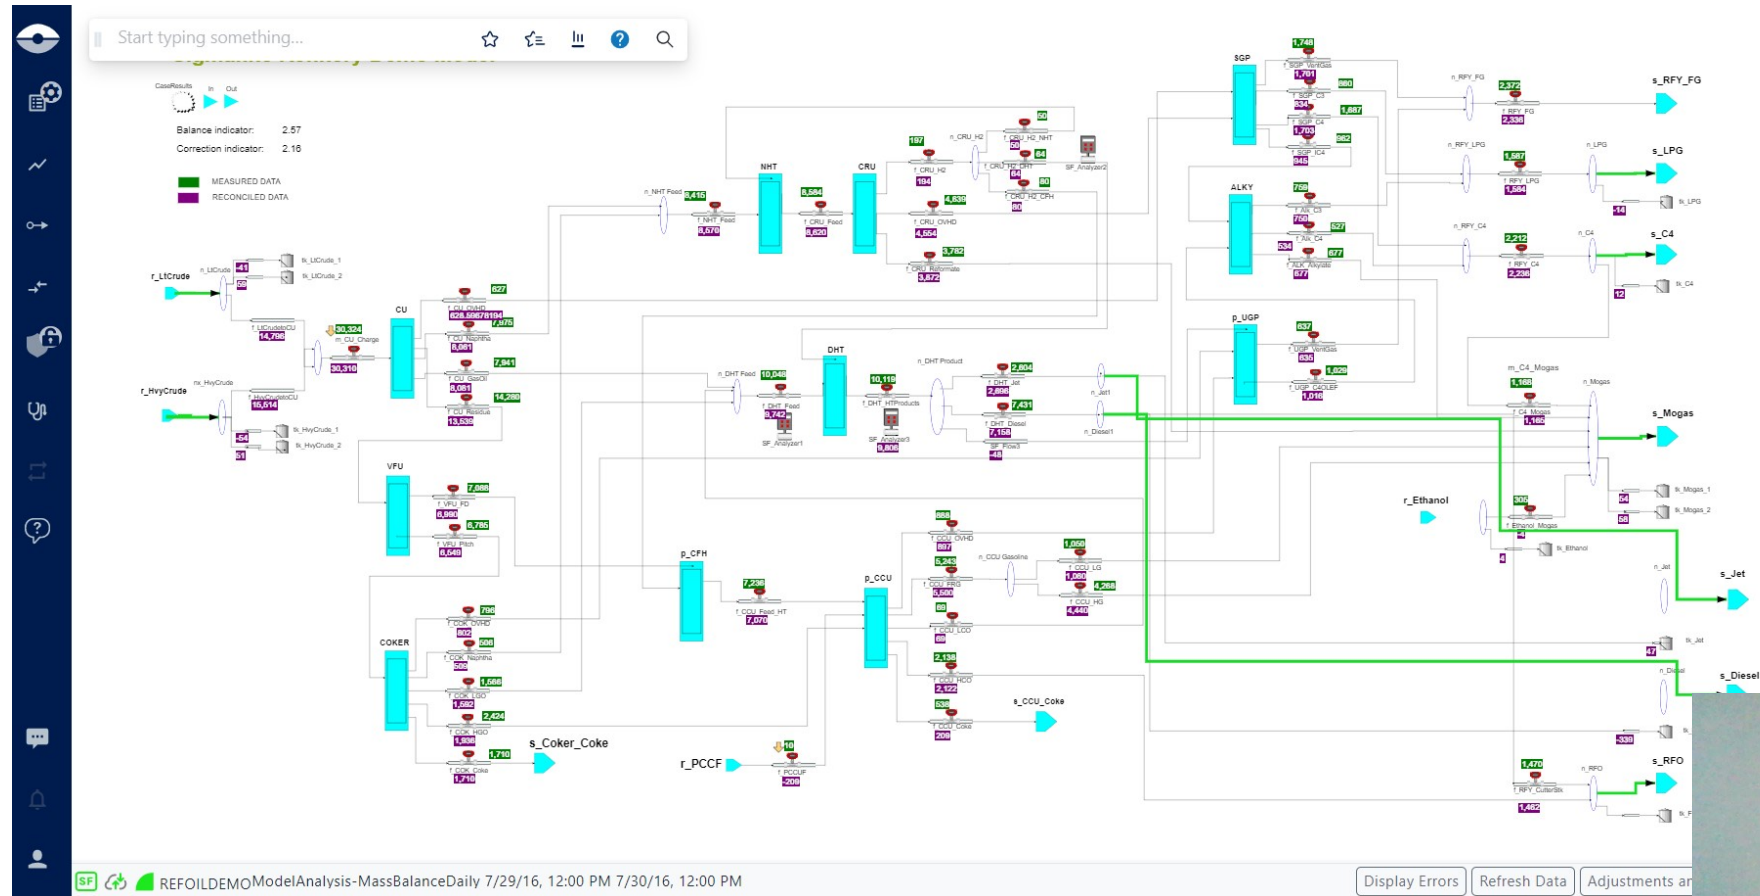

PI AF capabilities are extended data recording and tracking

A few examples of our customers

Summary

PI System as a Data Infrastructure

An infrastructure unifies disparate data sources and information silos to build a single, comprehensive source of reliable data.

Real-time data is key to increasing operating efficiency and reliability, as well as integrating more closely with supply chain partners.

PI System provides a **secure hub for contextualized operations data** that can be extended via the cloud to give data access to any authorized person, application or tool in any location.

We are here to support your journey to Performance Intelligence.

PERFORMANCE INTELLIGENCE

The PI System Advantages

Highly reliable system of record

Easy self-service access and visualization

Aggregate data in distributed environments

Analytics and event tracking

Attach context & meaning to data

Fast integration with analytic tools & apps

Secure data across all domains

Fast integration with analytic tools & apps

THANK YOU

OSIsoft

ABOUT AVEVA

AVEVA is a global leader in industrial software, driving digital transformation and sustainability. By connecting the power of information and artificial intelligence with human insight, AVEVA enables teams to use their data to unlock new value. We call this Performance Intelligence. AVEVA's comprehensive portfolio enables more than 20,000 industrial enterprises to engineer smarter, operate better and drive sustainable efficiency. AVEVA supports customers through a trusted ecosystem that includes 5,500 partners and 5,700 certified developers around the world. The company is headquartered in Cambridge, UK, with over 6,500 employees and 90 offices in over 40 countries.
